BLOCK 14 CONTINUED

This amendment is issued to incorporate responses to contractor inquiries. The information is presented in Q&A format.

Q1. We would like clarification that Utility (GA Power) is providing material and labor for new primary cable and duct bank to new 500 transformer. We are clear that the scope includes material and labor for the rerouting of the feeder directly from the new transformer to building 91.

A1. Georgia Power is providing the transformer, pad, feed and the duct bank.

Q2. Is the existing floor in the data center a raised floor? If so, is it already grounded? Does it need to be grounded?

A2. Yes the data center has a raised floor and it is already grounded.

Q3. Are there any any alarm devices at the doors because there is a halon system in the room?

A3. No

Q4. The SK 1 drawing that is in our proposal package does not show this panel in the southwest corner of the building, it shows proposed MDF and ATS equipment in that area. Where does the 600 amp panel go?

A4. Same location

Q5. A.2-says to run 40a feeders to 2 existing CRAC units and 1 new CRAC unit. Plan views in our package don't seem to show all these CRAC units. Where on plan view are all three of these CRAC units located?

A5. Boiler Room

Q6. A.4 & 5- which PDU on plan view is existing and which is new?

A6. Racks one, two and three are existing and four is new.

Q7. Reference section 6.A.1, Page 2 of the Statement of Work version 1.6, 7/21/08, states that there shall be a new junction box installed adjacent to new chiller for future ATS. Page 4, section 2.E, states that contractor shall provide, install and test a new 600 amp ATS. Please provide clarification. Is the intent to provide a new service rated ATS in front of the new 600 amp rated MDP?

A7. YES, required for the generator.

Q8. Sketch 1 shows an indoor automatic transfer switch (ATS). In the generator specifications there is reference to a NEMA 3 ATS. Is the intent to install a NEMA 3 ATS indoors?

A8. YES, it is shown on the drawing.

Q9. Reference Question 6.A.3, page 2 in the Statement of Work. The referenced section specifies an over current protective device (OCD) of 100 amps. The specification for this unit recommends a 175 amp OCD. Please clarify the ampacity of the McQuay 75 ton chiller.

A9. 175 OCD
